DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-4, 6-8, and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Drewery et al. (4,897,716).

Regarding claim 1, Drewery shows a television receiver for receiving a television signal and a movement information signal, which meets the receiving step as claimed, and cross fade controls 118 and 120, which meet the processing step as claimed. It should be noted that the movement information signal is essentially a video resolution control factor. It is inversely proportional to the video quality. A motion image in a video causes the image resolution to decrease, and vice versa. Therefore, the movement information signal reads on the quality indication signal as claimed.

Regarding claim 2, the cross-faders 110 and 112 meet the picture enhancement operation as claimed.

Regarding claim 3, the cross-faders 110 and 112 improve both the sharpness and contrast of the picture signal since they provide an interpolated video signal an original video signal based on the received motion indication signal.

Regarding claim 4, the cross-faders and the cross-fader controls are intended to reduce noise and artifacts.

Application/Control Number: 09/675,251

Art Unit: 2614

Regarding claims 6-8, and 10, see the corresponding rejections as applied for method claims above.

Allowable Subject Matter

- 3. Claims 12 and 13 are allowed.
- 4. Claims 5, 9 and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

5. Applicant's arguments filed 3/22/05 have been fully considered but they are not persuasive.

In considering applicant's argument that applicants submit that the Examiner is confusing video quality with video display quality... Motion in a video signal does not affect the quality of the video signal... Rather, it affects the quality of the displayed image... It should be understood that the motion information signal quantifies a characteristics of the content of the video signal but not the quality of video signal itself, the Examiner disagrees. First of all, video quality does affect the video display quality because the displayed image is the direct result of the video signal. Second of all, it is well known that motion in a video signal does affect the quality of the video signal because it degrades the details or sharpness of the image due to the capturing limitations of conventional video camera. Finally, broadly interpreted, the claimed "quality indication" term is the met by the motion indication signal in Drewery because applicants failed to substantiate the meaning of the term in the claim. The specification

Application/Control Number: 09/675,251

Art Unit: 2614

might support the meaning of such term but it is not allowed to interpret into the claim. Accordingly, it is clear that the Drewery still meets the claimed invention and the rejection stands.

Conclusion

6. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the 7. examiner should be directed to M. Lee whose telephone number 571-272-7349. The examiner can normally be reached on Monday through Thursday from 9 to 6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Miller, can be reached on 571-272-7353. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8000.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for
